

**Amendments to the Claims:**

This listing of claims will replace all prior versions, and listings, of claims in the application:

**Listing Of Claims:**

**Claims 1-42 (canceled).**

**Claim 43 (new):** A mobile terminal comprising:

a processor;

a memory coupled to the processor for storing data provided by the processor;

a display coupled to the processor for displaying images provided by the

processor;

a splitting application configured to split received data into at least two parts for displaying at least two substantially different images; and

a short-range transmitter coupled to the processor and configured to transmit at least one of the at least two parts to an external display device.

**Claim 44 (new):** A mobile terminal according to claim 43, further comprising a receiver for receiving a signal.

**Claim 45 (new):** A mobile terminal according to claim 44,

wherein the receiver is a wide-area network receiver.

**Claim 46 (new):** A mobile terminal according to claim 44,

wherein the memory comprises a buffer adapted to buffer the received signal to provide time for the splitting application to split the received data into the at least two parts.

**Claim 47 (new):** A mobile terminal according to claim 43,

wherein the processor is configured to forward to the display the at least one part of the received data that is not transmitted to the external display device.

**Claim 48 (new):** A mobile terminal according to claim 44,  
wherein the splitting application is configured to split received data into at least two parts based on headers in the received data.

**Claim 49 (new):** A method for handling image data at a mobile terminal comprising:

obtaining data in frames;  
splitting the obtained data into at least two parts for displaying at least two substantially different images; and  
transmitting at least one of the at least two parts to the external display device.

**Claim 50 (new):** A method according to claim 49,  
wherein the obtained data is received from a receiver.

**Claim 51 (new):** A method according to claim 50 further comprising:  
buffering a received signal to provide time for a splitting application in the mobile terminal to split obtained data into the at least two parts.

**Claim 52 (new):** A method according to claim 49 further comprising:  
forwarding to a display of the mobile terminal a part of the split data that is not transmitted to the external display device.

**Claim 53 (new):** A method according to claim 50, wherein the splitting of obtained data into at least two parts is based on headers in the obtained data.

**Claim 54 (new):** An article of manufacture comprising a computer readable medium containing computer readable code, which when executed by a processor causes the processor to split data obtained by a mobile terminal into at least two parts for displaying at least

two substantially different images and transmit at least one of the at least two parts to an external display device.

**Claim 55 (new):** The article of manufacture of claim 54,  
wherein the obtained data is received from a receiver.

**Claim 56 (new):** The article of manufacture of claim 55,  
wherein the computer readable code further causes the processor to buffer a  
received signal to provide time for splitting of the obtained data into the at least two parts.

**Claim 57 (new):** A system comprising a mobile terminal and an external display  
device,

wherein the mobile terminal comprises a processor; a memory coupled to the  
processor for storing data provided by the processor; a display coupled to the processor for  
displaying images provided by the processor; a splitting application configured to split received  
data into at least two parts for displaying at least two substantially different images; and a short-  
range transmitter coupled to the processor and configured to transmit at least one of the at least  
two parts to the external display device; and

wherein the external display device displays a substantially different image from  
the display of the mobile terminal.

**Claim 58 (new):** A system according to claim 57, further comprising a receiver  
for receiving a signal.

**Claim 59 (new):** A mobile terminal according to claim 58,  
wherein the receiver is a wide-area network receiver.

**Claim 60 (new):** A system according to claim 58,

wherein the memory comprises a buffer adapted to buffer the received signal to provide time for the splitting application to split the received data into the at least two parts.

**Claim 61 (new):** A system according to claim 57,

wherein the processor is configured to forward to the display the at least one part of the received data that is not transmitted to the external display device.

**Claim 62 (new):** A system according to claim 58,

wherein the splitting application is configured to split received data into at least two parts based on headers in the received data.
